Maintenance and Care for FurnX Products

It is important that maintenance be done on a regular basis.

Dirt and grime can damage powder coated and melamine surfaces, and regular cleaning will assist with the appearance and performance of your product.

During cleaning the following should be noted:

1. Clean surfaces with a dilute solution of a mild liquid detergent in warm water. Avoid excessively hot solutions.
2. Do not use abrasive tools on surfaces.
3. After cleaning rinse the film with fresh water.
4. Do not use strong solvent type cleaners.

Where a product has door tracks, regular vacuuming to clear dust and debris will assist the operation and longevity of the doors.

Do not chop, cut, or slide heavy objects, directly on melamine or powder coated surfaces as they will scratch and scuff.

Products are designed for indoor use only unless otherwise specified in FurnX brochures or on www.rapidline.com.au

Exposure to the elements can lead to rusting of steel product or swelling of melamine board.

Where possible do not position product directly in sunlight as this can lead to fading of colours.

FurnX products are designed for use in normal Commercial applications. In particular:

1. Do not drag product.
If product needs to be moved use a trolley designed for the purpose.
2. Do not sit on desk or steel storage product unless it is designed for that purpose.
3. It is recommended to sit in chairs using an upright posture, not leaning back excessively and getting in and out of the chair as gently as possible so not to cause excessive wear on mechanisms.
